IBKR COMMISSION PRICING

# Configure Tiered Pricing for SB-ITM

How to verify and change the stock commission structure in Interactive Brokers Client Portal.

**SB-ITM recommended setting for US equities: IBKR Pro - Tiered**

This setting can materially reduce minimum commissions on small or medium-sized automated orders compared with IBKR Pro - Fixed.

## Why this setting matters

SB-ITM may place multiple independent stock orders with controlled position sizes. On US stocks, IBKR currently publishes different minimum commissions for Tiered and Fixed pricing. For smaller orders, the minimum per order can therefore have a visible impact on net performance.

### Current IBKR US stock pricing - first volume tier

| | IBKR Pro - Tiered | IBKR Pro - Fixed |
|---|---|---|
| **Published rate (≤300,000 shares/month)** | $0.0035/share | $0.005/share |
| **Minimum per order** | $0.35 | $1.00 |
| **Third-party fees** | Passed through | Generally included* |

*Certain US regulatory charges may still apply. IBKR rates and conditions can change; always refer to the current IBKR pricing page.

**Important**

Tiered pricing does not guarantee a lower commission on every individual trade. Exchange, clearing, regulatory fees and potential rebates are passed through under Tiered pricing, so the exact commission can vary by execution venue and order characteristics. This guide documents the SB-ITM recommended configuration; it is not a representation that one IBKR pricing plan is universally cheaper for every investor or every market.

## How to verify or change the setting

IBKR can change menu wording or placement over time. The sequence below reflects the current Client Portal structure and the official IBKR guidance that the pricing structure can be changed after account activation.

1

**Log in to IBKR Client Portal**
Use the account that is connected to your SB-ITM LIVE environment.

2

**Open Settings**
Select the profile / head-and-shoulders icon in the upper-right corner, then select Settings.

3

**Open Account Settings**
In the Account Settings area, locate the pricing configuration. Depending on the account entity and current IBKR interface, the label may appear as Pricing Structure, Stock Pricing Structure or a similar pricing-plan entry.

4

**Review the stock pricing structure**
For an SB-ITM account trading US equities, verify that the stock commission structure is set to **Tiered** rather than Fixed.

5

**Select Tiered and submit the change**
Follow the on-screen confirmation process. A pricing change may require processing by IBKR and may not apply immediately to orders already submitted or executed.

6

**Verify before the next LIVE trading session**
Return to the settings page and confirm that Tiered is displayed as the active structure. If the setting is unavailable or unclear, contact IBKR Support before relying on the change.
